## Safe, Gentle, Non-corrosive, and Non-Staining

KennelSol® is a broad spectrum germicidal cleaner, deodorizer and disinfectant formulated for animal care facilities. The concentrated formula knocks out pathogens in one easy labor-saving step. This very popular quaternary disinfectant is EPA registered and kills a broad spectrum of pathogens, including many important to the animal care industry. Effective against viruses (including **Canine Parvovirus**), bacteria, and fungi.

KennelSol® retains its efficacy even in hard water. KennelSol's pH remains neutral at a dilution of 2 oz per gallon of water (**8 oz per gallon for Canine Parvovirus**) provides for the highest level of safety for animals and humans with no rinsing necessary. It has a contact time of 10 minutes. Once it is dry, it is completely safe for the animals to go on. It is non-corrosive and non-staining to surfaces and clothing if spilled. An abundant

level of detergent and odor control makes it an extraordinary cleaner while its wintergreen fragrance leaves behind a "fresh and clean" scent.

## How to use:

1. Dilution of 2 oz. per gallon of water (**8 oz per gallon for Canine Parvovirus**)
2. Spray on non-porous surfaces. It has a contact time of 10 minutes.
3. Once it is dry there is no need to rinse. It is completely safe for the animals to go on.

**1** **DILUTE**  
2 oz/gallon

**2** **APPLY**  
Spray on surface

**3** **WAIT**  
Until Dry. No Rinse
