VEDCO SUTURES

Quality Products

All Vedco veterinary suture products are produced in an FDA-registered, ISO-certified facility in Norcross, GA. All our veterinary suture meets or exceeds United States Pharmacopeia [USP] specifications [differs from USP only in diameter for Chromic Gut, MSA & VedaQuik]. Maintaining these high manufacturing standards helps to ensure the quality and performance of all our suture products.

Our goal is simple: produce exceptional products, at reasonable prices, in order to help veterinarians provide quality medical care to all their patients.

VEDCO NEEDLES

Premium Needles

Vedco premium suture needles are made from 300 series stainless steel. This material offers excellent strength, sharpness, sharpness retention and ductility.

- Finer needle point geometry helps to ensure excellent penetration reducing patient trauma.
- Combination of strength and ductility makes suturing easier for the surgeon.
- Resistant to bending and breaking assists in greater surgical control for the surgeon.

Vedco vs. the Leading Brand

The top three selling needles in the veterinary market are used in over 75% of surgical procedures [Refer to chart below]. Minimize the degree of trauma that suture needles can cause your patients by using needles that are sharper than the leading brand.

Vedco premium suture needles are laser drilled to provide a smooth transition between the needle and the suture material, reducing tissue trauma. Our tip to swage silicone-coated needles:

- Maintain their sharpness from start to finish over multiple passes
- Offer consistent needle penetration pass after pass
- Enhances needle control and placement

PRODUCT DESCRIPTION

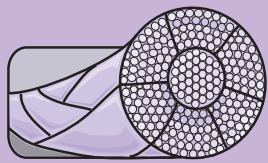

Supra Sorb™ Ultra is a coated, braided, synthetic absorbable surgical suture, composed of Polyglycolic Acid (PGA) and is available dyed. Only FDA-approved color additives are used. The suture is coated with polycaprolactone and calcium stearate.

Supra Sorb™ Ultra is indicated for use in general soft tissue approximation and/or ligation, including use in ophthalmic procedures, but not for use in cardiovascular and neurological procedures.

Violet PDO Monofilament Suture

PRODUCT DESCRIPTION

MSA ULTRA is a polydioxanone (PDO) monofilament synthetic absorbable, sterile surgical suture prepared from the polyester, poly(p-dioxanone).

Monofilament Polydioxanone synthetic absorbable suture is indicated for use in soft tissue approximation and/or ligation, including use in pediatric cardiovascular and ophthalmic procedures. Polydioxanone suture is not indicated in adult cardiovascular tissue, microsurgery, and neurological tissue. This suture is particularly useful when the combination of an absorbable suture and extended wound support is desired.

Violet PGCL Monofilament Suture

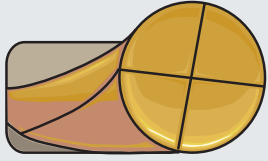

PRODUCT DESCRIPTION

VedaQuik™ is a synthetic absorbable monofilament surgical suture, composed of poly(glycolide-co-caprolactone) (PGCL). PGCL synthetic absorbable monofilament sutures are available dyed with FD&C violet #2. PGCL synthetic absorbable monofilament suture meets all requirements established by the United States Pharmacopoeia (U.S.P.), except for diameter.

VedaQuik™ synthetic absorbable monofilament sutures are indicated for use in soft tissue approximation and/or ligation, but not for use in cardiovascular or neurological surgery, microsurgery, or ophthalmic surgery.

Natural Chromic Gut Treated Suture

PRODUCT DESCRIPTION

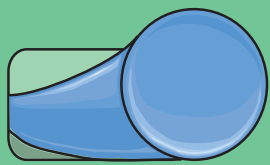

Chromic Gut sutures are absorbable sterile surgical sutures composed of purified connective tissue (mostly collagen) derived from the serosal layer of beef (bovine) or the submucosal fibrous layer of sheep (ovine) intestines. They are packaged in a solution of 90% isopropanol, 0.5% sodium benzoate, 0.5% diethylethanolamine, and water q.s. ad 100%. Chromic Gut is treated with chromic salt solution.

Chromic Gut sutures are indicated for use in general soft tissue approximation and/or ligation, including use in ophthalmic surgery, but not in cardiovascular or neurological surgery.

PowerCore™ | CRUCIATE REPAIR

PowerCore™

A non-absorbable synthetic surgical suture composed of an ultra-high molecular-weight braided polyethylene fiber that provides strength superior to most other suture materials used in orthopedic surgery.

PowerCore™ is 15 times stronger than steel on a weighted basis and has excellent abrasion resistance. Suture breaking during knot tying is virtually eliminated.

PowerCore™ suture will lay down at the knot and provide a more natural feel for the patient. The braided construction of the material eliminates the sharp ends associated with steel and heavy monofilament nylon.

PowerCore™ is extremely pliable and ties easily, but can also be crimped.

PowerCore™ Cruciate Repair is made with a straight needle on one end and a curved needle on the other. The curved needle is designed to help promote correct placement while the straight needle is used to pass through the tissue at the most distal point possible.

15 Times Stronger Than Steel

POWERCORE™ CRUCIATE REPAIR			
Suture Code	Suture Length	Needle	Straight Needle
P05M	36"	Large	60 mm
P05S	36"	Small	60 mm

Ultra Sutures

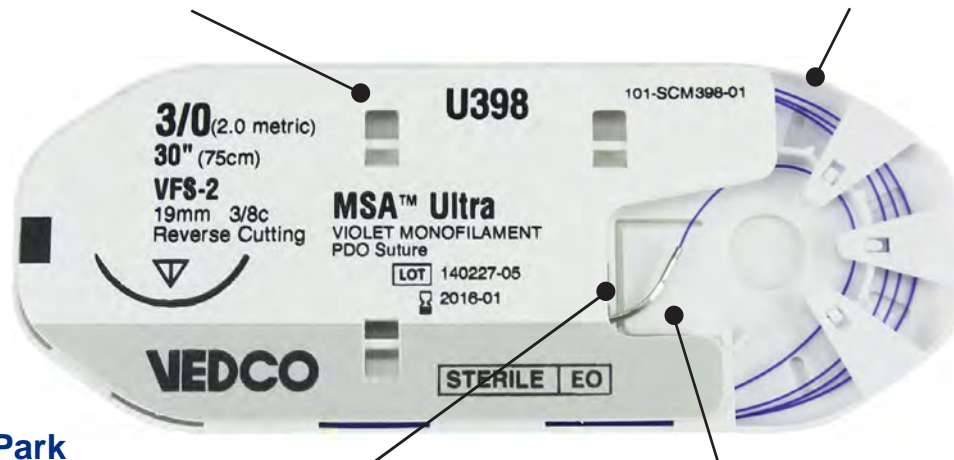

Featuring a Racetrack Suture Card

Polyolith Card

Helps reduce moisture content, an advantage with absorbable suture materials that degrade by hydrolysis.

Larger Diameter

Larger overall diameter to ensure less suture memory and minimize the number of suture rotations around track.

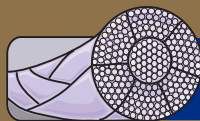

Needle Park

Two needle parks to accommodate a wide range of needle types, sizes, and double-arm sutures. Needle park also protects needles from damage.

Press-push Needle Lift

The tab, when pressed from behind, lifts needle for easy removal.

The following swaged-on sutures are available in the Racetrack design

SUPRA SORB™ ULTRA

Coated, braided, Polyglycolic Acid (PGA) synthetic absorbable suture

MSA™ ULTRA

Monofilament Polydioxanone (PDO), synthetic absorbable suture.

VEDAQUIK™ ULTRA

Monofilament Poly (glycolide-co-caprolactone) (PGCL) synthetic absorbable suture.

MONOLON™ ULTRA

Monofilament nylon, non-absorbable suture.
