

Effective Lyme protection. Successful vaccination experiences.

Nobivac^{*} Lyme

Recommendations to help support the best client interactions

Success starts with the right protection—Nobivac® Lyme

- Designed to target the 2 key outer surface proteins (Osps) involved in disease transmission
- The only vaccine proven to trigger borreliacidal antibodies against OspA and OspC, killing Borrelia burgdorferi in the tick and in the dog^{1,2}
- The first vaccine shown to help prevent clinical disease, such as arthritis and other signs of Lyme disease^{1,2}
- Highly effective: no serologic evidence of exposure to B. burgdorferi

THE ADJUVANTED ADVANTAGE

Nobivac® Lyme holds the proteins in one spot, which leads to a more robust immune response

TIPS FOR STORAGE AND ADMINISTRATION

- Store at 35°F–46°F
- Bring to room temperature before use
- Mix well
- Administer with a 22-gauge needle in the interscapular region

Having "The Right Response"

Vaccine responses aren't always a bad thing. Here are 3 points you can share to put your clients' minds at ease:

EXPLAIN that their dog may be lethargic or sore at the injection site

This simply means the **VACCINE IS WORKING**

It helps them know their dog is getting a FULL LEVEL OF PROTECTION

Stimulate borreliacidal antibodies. **Double your Osp protection.**
