## Flexadin® Advanced - a breakthrough product containing UC-II®

Flexadin® Advanced with UC-II® is a major leap forward in the quest to support joint health. With the unique active ingredient UC-II®, Flexadin® Advanced works differently than traditional supplements that contain glucosamine and chondroitin. Perfect for use on both cats and dogs of any size.

### What is UC-II®\*?

- A unique and proprietary form of undenatured type-II collagen which works through oral tolerization to help maintain the normal metabolism of joints
- Its advanced formulation helps support normal joint function by targeting the immune system

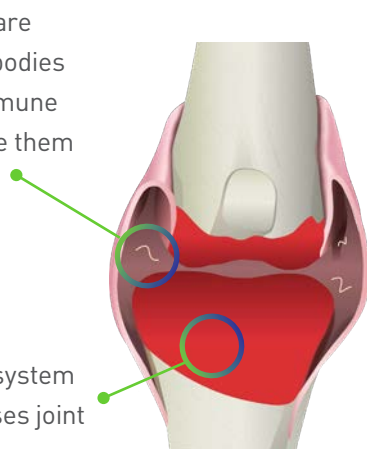

### How Flexadin® Advanced with UC-II® works

JOINT SHOWING IMMUNE RESPONSE

FLEXADIN® ADVANCED WITH UC-II® HELPS MINIMIZE DISCOMFORT

Loose bits of collagen are recognized as foreign bodies which activates the immune system to try to remove them

As the immune system activates, it causes joint stiffness and soreness

Flexadin® Advanced with UC-II® targets your pet's immune system in a process called oral tolerization

Helping the immune system maintain normal joint metabolism

## Flexadin® Plus

For those wanting a more traditional method of supporting joint health, try Flexadin® Plus. Containing active ingredients glucosamine and chondroitin, as well as MSM, Omega-3 fatty acids, Vitamin C, and Vitamin E, it's another option for both dogs and cats that is available in two formulations, chews and tablets.
