

HOW TO USE PH·NOTIX™ EAR CLEANER FOR DOGS AND CATS

PH·NOTIX™ INCLUDES:

- STANDARD APPLICATOR TIP
- LONG FLEXIBLE PLASTIC APPLICATOR

- ▶ Avoid using the same bottle/tip with multiple patients. If doing so, clean the applicator tip and then disinfect with alcohol or chlorhexidine after each use.
- ▶ If using the long flexible plastic applicator tip, once the amount of ear cleaner is “squeezed” in the external ear canal, remove the applicator/bottle before releasing the “squeeze” to avoid creating a suction that will contaminate the ear cleaner in the bottle.
- ▶ Clean and disinfect applicator tip as described above.
- ▶ Massage gently from bottom to top to loosen and remove debris. Allow pet to shake head and wipe off excess product with cotton ball. Do not use a cotton swab.
- ▶ To avoid contamination of the applicator tip, a cotton ball may be soaked with pH·notix, squeezing the liquid into the ear canal. Rinse the applicator with tap water after use.

ABOUT EAR CLEANING

- | pH·notix™ is an effective and fast ear cleaner designed to support removal of copious otic debris or discharge (ceruminous and/or purulent).
- | “The frequency of ear cleaning will be determined by the type and amount of debris. Use as directed by your veterinarian.
- | pH·notix™ will not interfere with most veterinarian recommended topical treatments.
