

## JUST ONE BITE FROM AN INFECTED MOSQUITO IS ALL THAT IT TAKES.

How heartworm disease spreads:

Heartworms can be life-threatening and this dog can infect even more mosquitoes

Adult worms live and reproduce in the heart and pulmonary arteries. It takes 6 months to test positive after being bitten.

A new dog gets infected by a mosquito bite.

## EVERY SEASON IS HEARTWORM SEASON.

No matter what the season, products like Tri-Heart<sup>®</sup> Plus should be administered year-round without missed or late doses for effective heartworm protection.

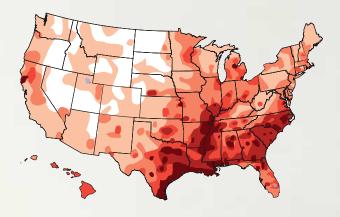

# TRI-HEART® PLUS PROVIDES PROVEN PROTECTION FOR EVERY SIZE DOG.

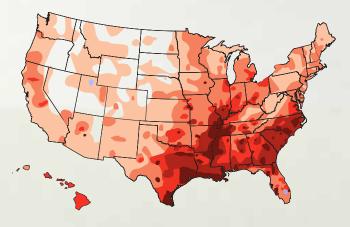

## HEARTWORM IS A THREAT IN ALL 50 STATES.

#### INCIDENCE OF HEARTWORM IN THE U.S.A.

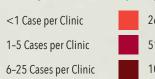

Heartworm-positive cases in 2013<sup>°</sup>

Heartworm-positive cases in 2016

#### Average Number of Cases per Reporting Clinic

26–50 Cases per Clinic

51-99 Cases per Clinic

100+ Cases per Clinic

All dogs should be tested for heartworm infection before starting a preventive program.

In a small percentage of ivermectin/pyrantel treated dogs, digestive and neurological side effects may occur. 1 Please refer to Tri-Heart® Plus Prescribing Information for more detail. © 2017 Intervet Inc., doing business as Merck Animal Health, a subsidiary of Merck & Co., Inc.
