A DERMATOLOGY SYSTEM

LIGHT ACTIVATED CHROMOPHORE GEL

NON-INVASIVE. NON-PHARMA.

WOUNDS ARE A CHALLENGE FOR MOST VETERINARIANS

CONSIDER USING PHOVIA ON:

- ⚡ Surgical incisions
- ⚡ Open and traumatic wounds
- ⚡ Cracked heels
- ⚡ Scratches

“Phovia is best suited for wounds where the bacterial infection has been resolved and the wound has a healthy bed of granulation tissue. In this type of wound, the epithelialization is rapid after the application of Phovia.”

Dean A. Hendrickson, DVM, MS, DACVS
Professor of Surgery Department of Clinical Sciences
Colorado State University

“Traumatic induced wounds had significant reduction in inflammation and healing time with Phovia treatments.”

Mary Beth Stanton, DVM, Williston Florida

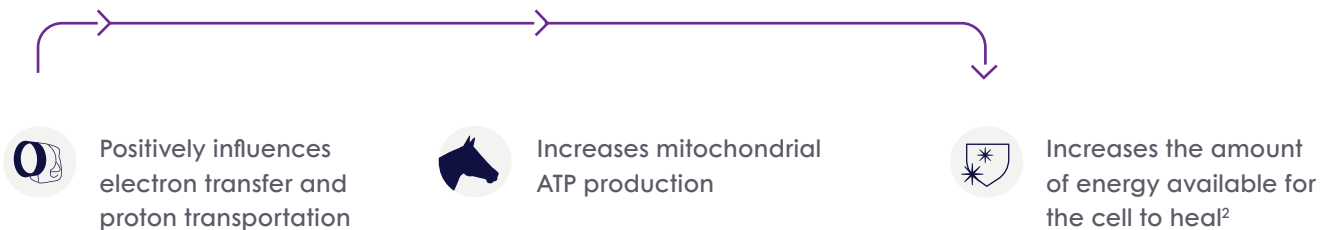

FLUORESCENT LIGHT THERAPY HEALS SKIN UP TO TWICE AS FAST

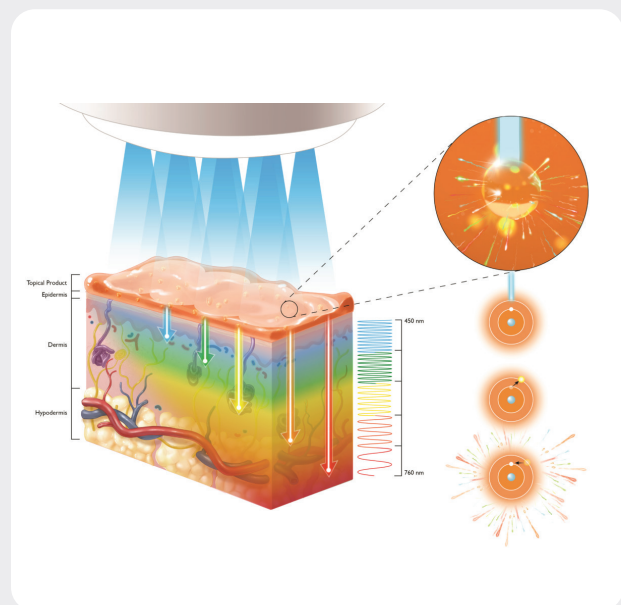

Photobiomodulation (PBM) is a low-level form of light therapy that uses non-ionizing forms of light sources in the visible and near infrared spectrum.¹

HOW PHOTOBIO-MODULATION WORKS

IN ANIMAL STUDIES, PBM WAS SHOWN TO STIMULATE SECRETION OF SEVERAL FACTORS.^{1,2} FLUORESCENT LIGHT THERAPY (FLT) REACHES DEEPER LAYERS OF THE SKIN VERSUS OTHER FORMS OF PBM:

- ⚡ Epidermal growth factor
- ⚡ Vascular endothelial growth factor
- ⚡ Fibroblast growth factors
- ⚡ Transforming growth factor beta
- ⚡ Collagen
