SkunkAway® Skunk Odor Remover

SkunkAway® presents a new and unique solution to this age-old problem. These odiferous compounds, known as osmogenes (chemical compounds such as hydrogen sulphide mercaptan, thioether, isovaleric acid, amines and ammonia) are effectively controlled and chemically complexed with the *Neutralization Factor* found only in SkunkAway. This amazing compound, called Neutralization Factor-7™ (NF-7) is a novel approach to the dissolution of hypervalent compounds with pungent odors such as skunk musk. NF-7 delivers a unique fixating complex that traps and absorbs mal-odor causing substances and remains stable even if the treated substrate dries. Through a proprietary chain reaction, NF-7 disassembles these mal-odors and re-assembles them in a new odor-free matrix, eliminating the mal-odor entirely. NF-7 serves to cleave sulfur-carbon bonds and complex the remaining compounds with an electron-rich replacement. It's electron swapping at its finest. This complex reaction can be referred to as *Reductive desulfonation followed by Reductive elimination*. This one-two reaction is the replacement of an unpleasant odor-causing sulfonyl group compound with a new stable non-odiferous result. SkunkAway® with NF-7 is the only product of its kind developed to completely neutralize skunk odors.
