

Why do veterinarians love Dentanomic instruments?

1 Periodontal ligament must be cut or stretched before tooth can be removed.

Periodontal ligament space is only 0.1 - 0.3mm wide.

Extra-sharp, thin precision blades fit in the periodontal space

OUR PRECISION BLADES DIRECT FORCE DIRECTLY TO THE LIGAMENT FOR EASIER SURGERY.

Hardened blades stay sharp for longer than cheap instruments and can also be honed.

2 Collar prevents blade sliding backwards. Bolt prevents blade sliding forwards.

Hexagonal section prevents twisting

Removable & replaceable blades

JUST REPLACE THE BLADE WHEN IT'S BLUNT, NOT THE ENTIRE INSTRUMENT.

Connection is standardised - any Dentanomic blade will fit any Dentanomic handle.

3

Shaped, weighted and balanced, palm grip ergonomic handles

PALM GRIP PREVENTS THE INSTRUMENT SLIPPING AND STABBING YOUR PATIENT.

Available in 5 stunning colors, short & long version for glove sizes from 5 to 9!

Cheap dental instruments make it difficult to extract teeth.

They don't stay sharp, don't have replaceable blades and aren't thin enough to easily enter the periodontal space.

Our blade types:

Elevation blades
Stretch periodontal ligament.
Use on thicker, stronger roots.

1. Wedge the blade into the periodontal space.
2. Gently rotate the blade and hold steady pressure for 10-30 seconds to stretch the ligament.

Luxation blades
Cut periodontal ligament.
Use on thinner, weaker roots.

1. Insert blade in the periodontal space.
2. Rock blade sideways into periodontal space. Do NOT pry the blade out or away from the tooth.
3. Simultaneously contour the blade around the root.

Using dental instruments as a prybar will damage both the instrument and the patient. If a surgeon uses correct surgical techniques, surgical performance and instrument life will be increased. More detail on correct surgical technique can be found at www.dentanomic.com.

Dentanomic™ is a trade mark of Bonovate Limited. Patent & registered design applied for.

"When we got a set of Dentanomic instruments, I could not believe the difference it made. Suddenly, extractions are faster and so much easier than before. Having great instruments has helped my confidence with dentals a lot; I no longer dread them!"

Bea, UK small animal veterinarian

Why Dentanomic?

It's much easier to cut ligament with our precision blades, than crush bone with cheap, blunt instruments.

No time for honing? New blades are not expensive and just slot into your existing handles. Blades should last for months even without maintenance (depending on surgical technique)

You can make your blades last longer by using our honing kit after each use.

Our customers report >30% faster extractions compared with using their normal instruments.

Shorter anaesthetics, better for geriatric patients & reduces risk of complications like hypothermia.

More ops/day or more chance of a lunch break.

Precise blades and ergonomic palm grip handle reduce risk of slipping & stabbing patient.

Reduce risk of hand strain – choose from small or large balanced handle options.

More precise surgical technique results in less tissue damage, less pain and better recovery.

~3/4 of pet dogs & cats have painful dental disease. Dental surgery is also a major driver of clinic profit that can't go online.

Easier, faster & safer dental extraction makes it more likely that veterinarians will recommend dental procedures.

Better instruments make it easier for you to provide the best care for your patients & enjoy and take pride in your dental surgery.
