

Vcheck fPL 2.0

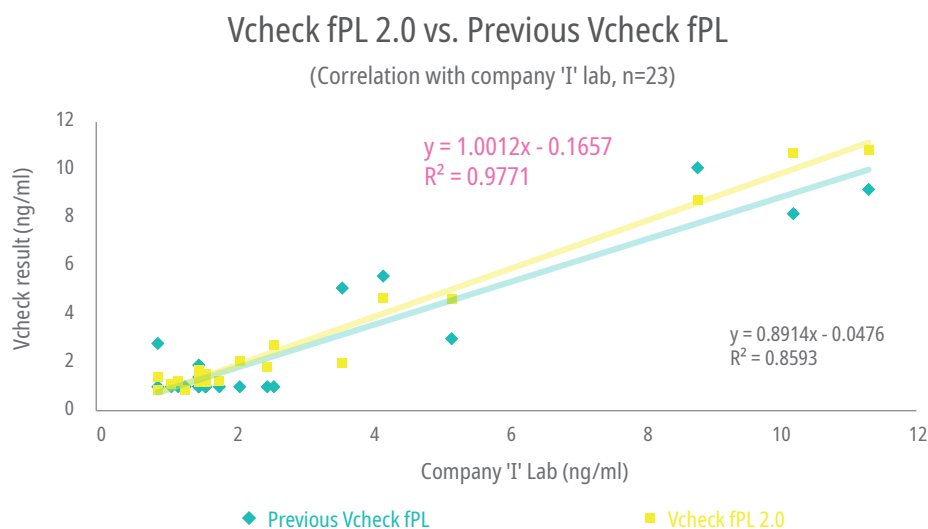

Definite diagnosis of Pancreatitis in cats, feline Pancreas-specific Lipase

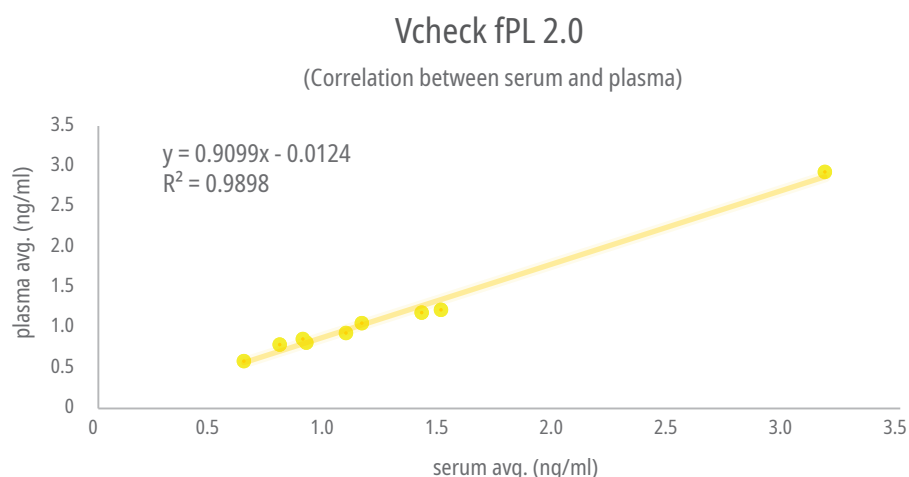

Greater accuracy at low concentrations

Stronger correlation of Vcheck fPL 2.0 ($R^2=0.98$) with company 'I' laboratory compared to our existing products ($R^2=0.86$)

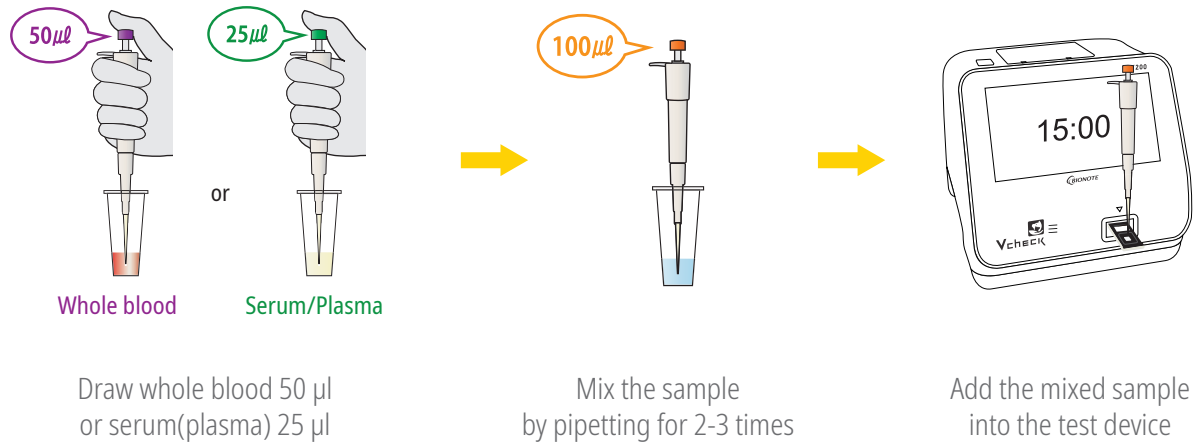

Enhanced usability

Other than blood serum, both plasma and whole blood are now available. Our evaluation result shows that there is strong correlation of test results between serum and plasma ($R^2 = 0.99$).

A user-friendly procedure

Newly changed pad-type procedure is very simple and easy to follow, improving user convenience. Also, this change helps reduce user errors, which increases reproducibility of test results.

*In case of using whole blood, it may affect the test results since each individual has different hematocrit levels (HCT; volume percentage of red blood cells) in blood. HCT levels less than 20% may cause falsely high values and HCT levels greater than 60% may cause falsely low values.

Features

Sample
Serum, Plasma(EDTA) 25 µl
or **Whole blood 50 µl**

Measurement Range
1 – 50 ng/ml

Test Time
15 min.
